Hemparade® Animal Bedding

Hemparade® animal bedding is made from the woody core of environmentally grown fibre hemp. No insecticides or pesticides are used in the cultivation of fibre hemp.

Better absorption

The natural absorption capacity of hemp wood is considerably higher than that of conventional materials. Moisture, odours and ammonia are absorbed better and more rapidly. Absorbency 500 - 600%.

Hemp bedding is ideal for horses' hooves, as it forms a springy, insulating bedding. Hemp bedding structure prevents it from clogging the animal's hooves. Acidification of stable litters such as wood shavings regularly leads to hoof damage. Farriers rarely come across incidents of hoof rot or other problems where hemp litter is used. Vets recommend the use of Hemp bedding.

Dust-free and moisture regulating

Great care has been taken to clean and refine each bag of **Hemparade®** to ensure a consistent product. We have removed the dust and spores from **Hemparade®** through a unique dust extraction process. You will find that **Hemparade®** provide a very clean stable environment due to the dust extracted and ammonia absorbing qualities.

Veterinary surgeons advise using hemp litter in the stable for horses with an allergy or respiratory problem. **Hemparade®** is equally ideal for those caring for horses that suffer from similar complaints.

Hemparade® also provides a hygienic and comfortable pet habitat due to the above qualities and after use is suitable for organic waste disposal and after composting it can be used as a biological garden fertilizer.

Hemparade® is suitable for all hoofed animals and for use in poultry and rabbit farming.

Hemparade® is readily available at all major stockfeed supplies and pet stores.

Hemparade® comes in bales of approx. 14kg.

FULLY SUSTAINABLE & BIODEGRADABLE

Biobase®

OzHemp

How to Use Hemparade®

If the stable is clean & empty, it takes around 8-10 bales of **Hemparade®** to create the initial bed in a typical 3.6 x 3.6 meter stable.

1. Litter down a clean stable with one bale of **Hemparade®** per one and a half to two square metres.
2. Spread evenly over the floor, banking up sides if required.
3. Remove damp patches and manure daily with a fine-tined fork.

If a stable has an existing bed of shavings or chopped straw (or similar) there is no need to remove this completely before starting a **Hemparade®** bed. Just spread out as normal, but gradually move existing bed towards the centre and add **Hemparade®** round the sides over a period of time.

The important thing to remember about a hemp bed for your horses is to disturb it as little as possible. Maintain the thickness of the bedding by replenishing with fresh **Hemparade®**.
The average amount for replenishing is approximately one bale per month. This depends on the level of maintenance and the horse's habits.

There will be less bedding removed from the stable where **Hemparade®** is used, making a smaller waste heap and decomposes quickly into a highly fertile organic compost or mulch for the garden.

Hemparade® is unpalatable to virtually all horses, but if the bedding is seen to be eaten, sprinkle it with a weak solution of eucalyptus extract to discourage the habit. A similar product treated with eucalyptus oil is available as **BioBase®**.

Using **Hemparade®** saves on labour as the stable bedding can stay put in the stable for a longer period. Hence the usage is significantly lower than that of straw or wood shavings. Added advantages are: less storage space, labour savings and a reduced quantity of stable waste.

Product Range

Mini-Hemp® for small animals

- 12ℓ, 48ℓ and 100ℓ packs
- Hygienic and virtually dust-free
- Provides a healthier habitat
- Better absorption of moisture and odours

Hemp bedding is used to cover the floors of cages for pets such as rabbits, guinea pigs and birds. **Mini-Hemp®** provides a hygienic and comfortable pet habitat. **Mini-Hemp®** is user friendly and can be used for longer periods compared to other pet bedding.

Hemparade® for hoofed animals

- 14kg (140ℓ) bales
- Forms compost within 6-8 weeks
- Smaller manure volume
- 500% - 650% absorption
- Virtually dust-free
- Lower bedding costs per box/horse
- Spread down: 1 bale per $2m^2$
- Maintenance approx.1 bale per month

Hemparade® is suitable for all hoofed animals and for use in organic chicken and rabbit breeding.

Biobase® for Horses

- 14kg (140ℓ) bales
- Treated with Eucalyptus oil which prevents animals eating the bedding
- Antiseptic abilities and fresh smell in stables
- Same advantages as **Hemparade®**

The advantages of this product are equally numerous.

Felisorb® Hemp Pellets Cat Litter

- 10kg packs
- No Chemical Additives
- Superior Absorbency
- Reduced Odour
- Reduced Tracking
- Longer Lasting & Garden Friendly

A fully sustainable and biodegradable product.

Sorbliss® Small Animal Bedding

- 10kg pack
- No Chemical Additives
- Superior Absorbency
- Lasting Odour Control
- Virtually Dust Free
- Easy To Clean & Maintain
- Reduced Tracking
- Longer Lasting & Garden Friendly

Suitable For Rodents, Mammals, Birds & Reptiles.

Benefits of Hemparade®

Highly Absorbent

Hemp wood's natural absorptive capacity is significantly higher than that of conventional materials. It makes a springy and insulating stable bedding. **Hemparade®** is ideal for the horse's hoof. Its structure prevents the material from clinging to the animal's hooves.

Low Odour

Hemparade® also absorbs ammonia very efficiently, reducing its harmful effects on the respiratory system, and reduces odour. Reduction in odour helps reduce flies.

Dust Extracted

Unlike wood shavings and straw **Hemparade®** is virtually dust-free and has a moisture-regulating effect. Vets advise the use of hemp litter in stables of horses with allergies or bronchial problems.

Economical to Use

Less **Hemparade®** is needed to do the same job as other litters. With **Hemparade®** high absorbency, wet areas tend to be smaller and noticeable less often. The particle size easily falls through pitchfork tines, ensuring very little bedding is removed during removal of manure. It is easy to use and cost effective.

Labour Saving

Using **Hemparade®** saves on labour as the stable bedding can stay put in the stable for a longer period. Hence the consumption is significantly lower than of straw or wood shavings. It should be disturbed as little as possible, with the wet material removed as required.

Easy Disposal

Hemparade® creates only a small manure heap, which rots down into quality garden compost in just a few weeks.

Convenient

Hemparade® is supplied in watertight heat-sealed polythene bales, which are convenient to handle and can be stored inside or out.

Environmentally Friendly

Hemparade® is made from a sustainable source and is completely biodegradable. No trees were lost using **Hemparade®**, thus reducing our carbon footprint.
