

# MiniHemp® for Poultry Bedding

**MiniHemp®** is made from the delicate woody core of the hemp stalk. Hemp is an eco-friendly and sustainable product that is highly absorbent, naturally anti-bacterial and dust-free. It makes for a dry, warm and comfortable bed that provides good insulation against the cold and protection against injury.

**MiniHemp®** absorbs ammonia and reduces odours very efficiently, reducing its harmful effects on the respiratory system, making it a natural fly repellent. By maintaining a dry bedding environment, many poultry problems such as hock burns, breast blisters and pododermatitis will be greatly reduced, if not eliminated. **MiniHemp®** absorbs up to 12 times more liquid than straw and 4 times more liquid than shavings.

**MiniHemp®** creates a dust free environment for the birds: eliminating respiratory, nasal and eye infections that are often found in birds housed on traditional materials such as wood shavings and straw.

**MiniHemp®** encourages poultry to forage through their bedding, thus reducing boredom. **MiniHemp®** makes cleaning much easier as it is less frequently required and leaves the chicken coop smelling fresh in between cleans. Once mucked out, the soiled bedding breaks down within 8 weeks into quality organic garden compost.

**MiniHemp®** is a better economical choice as it lasts longer, translating into dollar savings through reductions in labour, transport and storage.

**MiniHemp®** is available in 12 Lt, 48 Lt and 140 Lt packs.

## How Much MiniHemp® To Use For Your Chickens?

1x 140L bag of **MiniHemp®** will cover 3.5m<sup>2</sup> @ 5cm deep.  
Simply change out the bedding as it becomes soiled.
